

$$(ii) \tan \theta = \frac{1}{5\sqrt{3}}$$

$$\Rightarrow \sin \theta = \frac{1}{\sqrt{76}}$$

$$\text{But, } \sin \theta = \frac{d}{100}$$

$$\Rightarrow \frac{d}{100} = \frac{1}{\sqrt{76}}$$

$$\begin{aligned} \Rightarrow d &= \frac{100}{\sqrt{76}} \\ &= 11.47 \text{ km} \end{aligned}$$

(iii) Two hours before:

relative distance = relative speed \times time

$$\begin{aligned} \Rightarrow x &= 17.44 \times 2 \\ &= 34.88 \text{ km} \end{aligned}$$

$$y^2 = x^2 + d^2$$

$$\begin{aligned} \Rightarrow y &= \sqrt{34.88^2 + 11.47^2} \\ &= 36.72 \text{ km} \end{aligned}$$

Q. 12.

$$\begin{aligned} (i) \vec{v}_A &= 10 \cos 30^\circ \vec{i} + 10 \sin 30^\circ \vec{j} \\ &= 10 \left(\frac{\sqrt{3}}{2} \right) \vec{i} + 10 \left(\frac{1}{2} \right) \vec{j} \\ &= 5\sqrt{3} \vec{i} + 5 \vec{j} \end{aligned}$$

$$\vec{v}_B = 3 \vec{j}$$

$$\vec{v}_{AB} = \vec{v}_A - \vec{v}_B = 5\sqrt{3} \vec{i} + 2 \vec{j}$$

$$(ii) |\vec{v}_{AB}| = \sqrt{(5\sqrt{3})^2 + 2^2} = \sqrt{79} \text{ m/s}$$

$$\tan \theta = \frac{2}{5\sqrt{3}}$$

$$\Rightarrow \theta = 13^\circ$$

$$\Rightarrow 13^\circ \text{ N of E}$$

$$(iii) \frac{d}{100} = \sin 13^\circ$$

$$\begin{aligned} \Rightarrow d &= 100 \sin 13^\circ \\ &= 22.5 \text{ m} \end{aligned}$$

(iv) Draw a circle of radius 30 m with centre B.

As long as the relative path, \vec{v}_{AB} , is inside this circle, Adam and Barbara will be within 30 m of each other. This will be for a relative distance of $2x$.

$$x^2 + d^2 = 30^2 \quad \dots \text{ but } d = 22.5$$

$$\begin{aligned} \Rightarrow x &= \sqrt{30^2 - 22.5^2} \\ &= 19.843 \text{ m} \end{aligned}$$

\Rightarrow Adam and Barbara will be within 30 m of each other for a relative distance of $2(19.843) = 39.686 \text{ m}$

$$\text{Time} = \frac{\text{relative distance}}{\text{relative speed}}$$

$$= \frac{39.686}{\sqrt{79}}$$

$$= 4.47 \text{ s}$$

Q. 13.

$$\begin{aligned} (i) \vec{v}_P &= 50 \cos 45^\circ \vec{i} - 50 \sin 45^\circ \vec{j} \\ &= 50 \left(\frac{1}{\sqrt{2}} \right) \vec{i} - 50 \left(\frac{1}{\sqrt{2}} \right) \vec{j} \\ &= 25\sqrt{2} \vec{i} - 25\sqrt{2} \vec{j} \end{aligned}$$

$$\vec{v}_Q = -30 \vec{j}$$

$$\vec{v}_{QP} = \vec{v}_Q - \vec{v}_P$$

$$= -25\sqrt{2} \vec{i} + (25\sqrt{2} - 30) \vec{j}$$

$$= -35.36 \vec{i} + 5.36 \vec{j}$$

$$\begin{aligned} |\vec{v}_{QP}| &= \sqrt{(-35.36)^2 + (5.36)^2} \\ &= 35.76 \text{ m/s} \end{aligned}$$

$$\tan \theta = \frac{5.36}{35.36}$$

$$\Rightarrow \theta = 8.62^\circ$$

$$\Rightarrow 8.62^\circ \text{ N of W}$$

$$(ii) \frac{d}{75} = \sin 8.62^\circ$$

$$\Rightarrow d = 75 \sin 8.62^\circ$$

$$\Rightarrow d = 11.24 \text{ km}$$
