

Q. 5. $\vec{v}_A = -16 \cos \theta \vec{i} - 16 \sin \theta \vec{j}$
 $= -16\left(\frac{3}{5}\right)\vec{i} - 16\left(\frac{4}{5}\right)\vec{j} = -9.6\vec{i} - 12.8\vec{j}$
 $\vec{v}_B = -v\vec{i}$
 $\vec{v}_{AB} = \vec{v}_A - \vec{v}_B = (v - 9.6)\vec{i} - 12.8\vec{j}$
 $|\vec{v}_{AB}| = 16$
 $\Rightarrow \sqrt{\left(v - \frac{48}{5}\right)^2 + \left(-\frac{64}{5}\right)^2} = 16$
 $\Rightarrow v^2 - \frac{96}{5}v + \frac{2,304}{25} + \frac{4,096}{25} = 256$
 $\Rightarrow 25v^2 - 480v + 6,400 = 6,400$
 $\Rightarrow 25v^2 - 480v = 0$
 $\Rightarrow 5v^2 - 96v = 0$
 $\Rightarrow v(5v - 96) = 0$
 $\Rightarrow v = \frac{96}{5}$
 $= 19.2 \text{ m/s}$

- (i) Find out how long it takes for A to get to the junction.

$$\text{Time} = \frac{\text{distance}}{\text{speed}} = \frac{96}{16} = 6 \text{ s}$$

Find out how far B has travelled at this time.

$$\begin{aligned} \text{Distance} &= \text{speed} \times \text{time} \\ &= 19.2 \times 6 = 115.2 \text{ m} \end{aligned}$$

Since B was 38.4 m from O at the beginning, B is now 76.8 m past O.

$$\begin{aligned} \vec{v}_{AB} &= 9.6\vec{i} - 12.8\vec{j} \\ \tan \alpha &= \frac{12.8}{9.6} = \frac{4}{3} \Rightarrow \sin \alpha = \frac{4}{5} \\ \text{But, } \sin \alpha &= \frac{d}{76.8} \\ \Rightarrow \frac{d}{76.8} &= \frac{4}{5} \\ \Rightarrow d &= 61.44 \text{ m} \end{aligned}$$

- (ii) 2 seconds before:

$$\begin{aligned} \text{Relative distance} &= x \\ &= \text{relative speed} \times \text{time} \\ &= 16 \times 2 = 32 \text{ m} \end{aligned}$$

Actual distance = y

$$\begin{aligned} y^2 &= 32^2 + 61.44^2 \\ \Rightarrow y &= 69 \text{ m} \end{aligned}$$

Q. 6. $\vec{v}_A = -10 \cos \theta \vec{i} - 10 \sin \theta \vec{j}$
 $= -10\left(\frac{4}{5}\right)\vec{i} - 10\left(\frac{3}{5}\right)\vec{j} = -8\vec{i} - 6\vec{j}$
 $\vec{v}_B = -20\vec{i}$
 $\vec{v}_{AB} = \vec{v}_A - \vec{v}_B = 12\vec{i} - 6\vec{j}$

Find out how long it takes for A to get to the junction.

$$\text{Time} = \frac{\text{distance}}{\text{speed}} = \frac{100}{10} = 10 \text{ s}$$

Find out how far B has travelled at this time.

$$\begin{aligned} \text{Distance} &= \text{speed} \times \text{time} = 20 \times 10 \\ &= 200 \text{ m} \end{aligned}$$

Since B was 100 m from O at the beginning, B is now 100 m past O.

$$\tan \theta = \frac{6}{12} = \frac{1}{2} \Rightarrow \sin \theta = \frac{1}{\sqrt{5}}$$

$$\text{But, } \sin \theta = \frac{d}{100}$$

$$\begin{aligned} \Rightarrow \frac{d}{100} &= \frac{1}{\sqrt{5}} \\ \Rightarrow d &= \frac{100}{\sqrt{5}} \\ &= 20\sqrt{5} \\ &= 44.72 \text{ m} \end{aligned}$$

Q. 7. $\vec{v}_A = -30 \cos 60^\circ \vec{i} - 30 \sin 60^\circ \vec{j}$
 $= -30\left(\frac{1}{2}\right)\vec{i} - 30\left(\frac{\sqrt{3}}{2}\right)\vec{j} = -15\vec{i} - 15\sqrt{3}\vec{j}$
 $\vec{v}_B = -40\vec{i}$
 $\vec{v}_{AB} = \vec{v}_A - \vec{v}_B$
 $= 25\vec{i} - 15\sqrt{3}\vec{j}$
